**BIENNIAL EXPO & CONFERENCE
FOR THE INDUSTRY OF COMPOSITE MATERIALS**

An increasingly “multimaterial” world...

...where new markets demand new technological solutions for operations that are more and more open to different knowledge and methods. This is the starting point for **Composites Future**, a biennial expo & conference jointly organized by **Assocompositi**, **Xylexpo** and **Plast**.

**PLAN AHEAD! DECIDE NOW
TO EXHIBIT AT THE FIRST EDITION
OF THE EXPO & CONFERENCE
COMPOSITES FUTURE!**

You will benefit from a **10 percent reduction** on your exhibition area.

If you register now, you will be **served first** for **booth allocation** and you will enjoy **greater visibility** among the companies that Composites Future-MaTec will promote in its information and communication campaign.

Composites Future is the **first B2B event** dedicated to technologies and innovative materials for **shipbuilding, aerospace, automotive, transportation, constructions** and many more manufacturing industries. In this landscape, the technologies for wood (Xylexpo) and for plastics and rubber (Plast) have always played a key role.

PIU EFFICIENZA
O PIU

COMPOSITES FUTURE, IS WAITING FOR YOU!

Composites Future, leveraging the synergy with Plast and Xylexpo, aspires to be a showcase for the world of composites, including materials and processing technologies. This industry is growing exponentially year after year: according to estimates, in 2025 the global market of high-performance composite materials will reach a total value **above 70 billion euro**.

Italy is among the top manufacturers of composites, after Germany, the Eastern countries, and Spanish and Portugal.

The **main target** industries are shipbuilding, automotive, aerospace, construction, wind power and alternative energy sources.

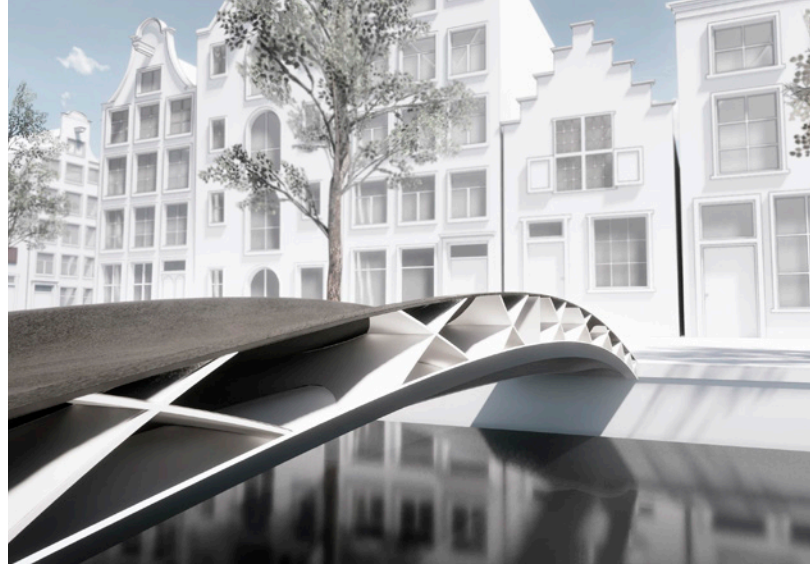

Composite materials are used in highly dynamic markets, where double-digit growth rates are expected in the next twenty years: hence, the need to experiment **new processing methods**, relying on “**similar**” **technologies** like those exhibited at MaTec 2026 from June 9 to 12.

ASSOCOMPOSITI

Associazione Italiana Compositi & Affini

Assocompositi, in charge for the organization of Composites Future, is the Italian association of composite material companies since 2005. It gathers over one hundred members including companies, professionals, research and academic institutes, creating a dynamic and highly qualified network. Assocompositi promotes all aspects of the industry's growth - technology, regulations, ethics and sales - and actively interacts with Italian and European institutions, contributing to the development of an innovative and competitive ecosystem.

COMPOSITES FUTURE DIGITAL

Composites Future will have a strong digital dimension, based on the proven Xylexpo digital platform. The events planned at the “**Composites Future Academy**” and the “**Composites Future Demo Area**” will be part of the channel schedule, so that the contents can be accessible also to those who cannot visit the exhibition but want to participate in the first edition of the expo & conference.

The contents will also be accessible to anyone willing to inform about the key topics and trends of composite materials on the website: www.compositesfuture.com.

The **MaTec** stage will offer plenty of opportunities for knowledge transfer and in-depth analysis, including the initiatives organized by **Plast** and many events within “**Xylexpo**”.

COMPOSITES FUTURE “ON STAGE”

In Hall 18, Composites Future will feature lots of in-depth **discussions and training activities**, designed to focus attention on the huge opportunities offered by innovative materials and the benefits from the collaboration with technology manufacturers operating in other industries, first of all **wood and plastics**.

From June 10 to 12, 10.00 to 11.30 a.m.

“Composites Future Academy”

Experts, engineers and operators will debate the state of the art of materials, modeling and forming systems, and processing technologies.

From June 10 to 12, 2.30 to 4.00 p.m.

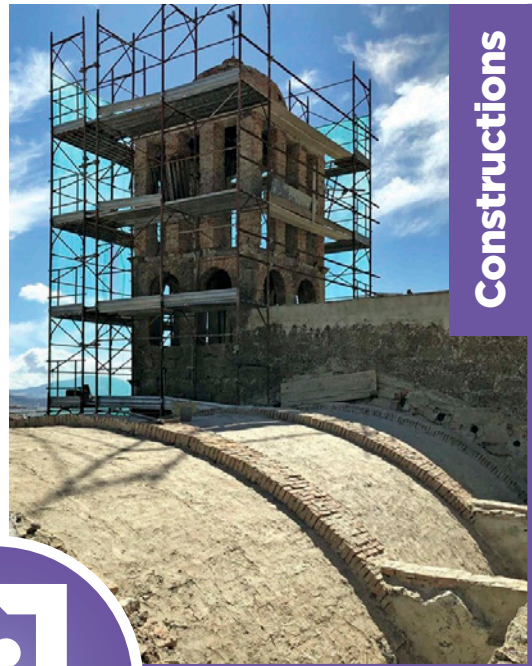

“Composites Future Demo Area”

A “hands-on campus” will show how composite materials are made and modeled, and which technologies can be used to process it.

Sustainability 

A highly innovative concept!

A brand new event for the more and more exciting universe of innovative materials; a partnership with the manufacturers of similar technologies, such as woodworking and plastics; a “digital vocation” and a rich calendar of side events: these are the magnets that will attract in Milan a large audience of operators looking for technologies, ideas and end-to-end solutions!

Joint promotion

Since last May, we have been working together with our partners involved in **MaTec-Next materials and technologies** to make the most of the premiere edition of **Composites Future**. This broad and extensive action has been driven by the three exhibitions on a national, European and global scale, with the valuable support of **ICE Agenzia**.
